

Sasha Zabersky

Senior Product Manager · UX / UI

• zverya@gmail.com • 054-753-1855 • linkedin/sashazabersky • zverix.com

With over 8 years of experience as a product manager, I have a passion for creating user-centric, data-driven and innovative solutions that address real-world problems, with a strong background in UX/UI design, user research, web applications and AI-centered products. In this fast-changing world, AI tools amplify my skills — letting me do my best work and deliver real impact. I believe in simplicity, authenticity and communication: in great products, in the work environment, and in life. And childlike excitement — there's never too much of that.

EXPERIENCE

Senior UX Designer

2025 — Present

Lumana

Lumana is an AI-powered video-security SaaS platform that turns any camera into a real-time monitoring, detection and response system. As part of a two-person design team, I own the end-to-end UX of a complex, data-rich web application — from new product concepts through design systems and developer handoff.

- Owned the design of 3 new products from concept to launch, expanding the company's app suite while driving each through user research, interactive prototyping and developer handoff.
- Established a process that moved UX work from Figma directly into Claude Code, connecting the design team to the developers' codebase — improving handoff accuracy and saving significant dev and UX hours.
- Designed new user flows and reworked existing ones across a complex, data-heavy interface, improving usability at key friction points identified through user and market research.
- Implemented a Figma design system and built interactive prototypes with Figma Make, standardizing components and ensuring visual and functional consistency across the entire product suite.

Product Manager, UX/UI

Jan 2023 — Dec 2024

Alison.ai

Alison is an adtech, AI-powered video-analysis SaaS platform. As the single product manager, I owned the entire product lifecycle — from planning the roadmap to executing it — while constantly optimizing the usability and interface of a data-heavy BI system.

- Led and initiated the adoption of an API-first approach, resulting in successful penetration of an untapped market segment and improved client retention.
- Led the development of an AI-based capability that accurately predicts competitors' creative CTR (click-through rate) — a key value proposition and a driving force in closing major deals.
- Established the process and infrastructure for data analytics, leading to the development and optimization of key product features.
- Successfully prepared the submission for the Israeli Innovation Authority grant.
- Defined and prioritized the daily and weekly tasks of the creative, dev and VA teams in Israel and Ukraine.

Founder — Carpentry business

2021 — 2023

Babe the Builder · career break

Pursued a personal goal of owning my own business, building a carpentry company from the ground up. Learned an enormous amount about real-world small business from every angle — customers, suppliers, employees and the tax authority — including when it's time to move on.

Product Management Consultant

2018 — 2021

Self-employed

Provided a broad spectrum of consultation to companies on product ideation, definition, specification and development. Among the companies I worked with:

- 2bPrecise (MedTech): Product, UX and UI for a desktop app aggregating lab-results data and adding a layer of information for EMRs.
- Nuance Hearing (MedTech): Product and UX prototyping for a hearing-device app.
- Applitools (Visual QA SaaS): Product, UX and UI for a new visual QA product.

Product Manager

2017 — 2018

Magisto

Magisto is a complete AI-powered video-marketing platform — the fastest way to create, distribute and optimize video — which had recently crossed 100M users. As mobile product manager I owned the ideation and execution of the company's top-grossing platform vision.

- Produced detailed PRDs, defining, prioritizing and overseeing the execution of tasks and features.
 - Conducted user testing and product demonstrations for clients, translating them into product optimizations.
 - Performed countless A/B tests on pricing UX and UI to continuously improve user engagement and monetization.
 - Managed the daily and weekly tasks of the creative and dev teams in Israel (iOS) and Ukraine (Android), including bi-monthly visits.
-

Director of Product

2015 — 2017

MyPermissions

MyPermissions, founded in 2012, quickly became the leader in personal-information privacy. As director of product, I led and executed the founders' vision across desktop, Android and iOS throughout the product lifecycle.

- Produced detailed PRDs and managed the releases of 3 new product versions across all platforms — new features, new infrastructure and new UX/UI.
- Initiated product improvements and new features based on analytics and user behavior.
- Led the execution of the company's vision and roadmap in collaboration with biz-dev and partners.
- Managed, defined and prioritized the daily and weekly tasks of the creative and dev teams.

Creative Director & Product Manager

2013 — 2014

MyPermissions

As head of creative and product manager, I created new branding and a unified design language across the company's products, and produced detailed flows and PRDs for the development team.

- Designed, executed and optimized the MyPermissions mobile cleaner for iOS and Android — one of TIME Tech's 50 best apps (2013, 2014) and featured in "New & Noteworthy" on the App Store.
 - Designed and optimized MyPermissions.com, running multiple A/B tests to increase conversion.
 - Wrote the specifications, designed and optimized the Certification portal, including a multi-stage certification wizard.
-

UX/UI Director & Product Manager

2012 — 2013

La-Mark Vision

La-Mark is a leading multi-platform digital-learning solutions provider with 35M subscribers worldwide. I managed a creative team of 8 designers, illustrators and animators.

- Developed the UX & UI concept and specification for an interactive English-learning product for children, in collaboration with Disney.
- Developed the UX & UI concept and specification for a multi-level English-learning app with major LATAM mobile carriers such as VIVO and Movistar.
- Oversaw implementation across the creative team and outsourced development.

Web Designer

2011 – 2012

Seeking Alpha

Web design for the crowd-sourced financial-markets research and analysis platform.
